1. Project Abstract:

Tales have stood the test of time; the art of story-telling is present in every language. In English it comes in many names such as tale, narrative, anecdote, legend, fable, saga; in Hindi, it would be called katha, kahani, dastan; in Tamil it would be called Kadhai and so on, but the fundamental concept being that no matter the language the art of storytelling is eternal. Centuries ago people would often huddle up around the fire and exchange stories, sing songs, narrate epics. In the 20th Century, in the birthplace of sagas such as Mahabharat, Shakuntala, Panchatantra and many; storytelling was dying, and it was a slow and painful death.

Kathanak, derived from the Sanskrit word meaning "plotline of the story" is a self-publishing website; it is a platform that brings together writers and readers in a virtual community that instigates a dialogue on literature in any language. It is the 21st century's answer to the age-old tradition of storytelling but now instead of being huddled up near a fire, readers and writers perch with their laptop, desktop or mobile screens.

2. Aim and objective:

The aim of this platform is to bring the readers and writers together to create an peaceful and an artistic world.

It helps the writer to share and develop their creative work while the readers gain some new perspectives of the world or something

3. Introduction

1. Purpose:

The purpose of this report is to specify the software requirements for the projects “Kathanak- a storytelling platform”. Kathanak is being developed for the storywriters and the readers. Kathanak aims to provide a platform that brings together writers and readers in a virtual community that instigates a dialogue on literature.

2. Document Conventions:

The following documentation conventions are followed in preparing the SRS document.

All keywords related to storywriting are formulated in Italics Georgia pro in the SRS document

3. Intended Audience and Reading Suggestion

The document is created for,

The Instruction of the course “Software Engineering” for the review and monitoring progress of the project.

The software development team for their use in analysing the requirements for this project.

4. Product Scope:

The scope of the “Kathanak” software package is :

- 1. Aims to provide a platform that brings together writers and readers in a virtual community that instigates a dialogue on literature.*

2. Kathanak transcends the boundaries of new thoughts, new stories, the elation of being heard and being understood and no matter how simplified the concept is, the fact remains that to be understood is equivalent to a sense of happiness.
3. A platform's real value lies in providing mobility and a superior user experience and this one of the foremost missions (vision) of Kathanak .

5. References

<Free Books, eBooks, Novels, Stories - Pratilipi> for PC Windows or MAC for Free (<indexcorner.com>)

<https://www.wattpad.com/>

4. Overall Description

4.1. Product Perspective

The various system tools that have been used in developing both the front end, the back end and other tools of the project are being discussed in this section.

FRONT END:

JSP, HTML, CSS, JAVA SCRIPTS are utilized to implement the frontend. Java Server Page (JSP)

Different pages in the applications are designed using JSP. A Java server page component is a type of java server that is designed to fulfil the role of a user interface for a java web application. Web development write JSPs as text files that combine HTML or XHTML code, XML elements, and embedded JSP actions and commands. Using JSP, one can collect input from users through a web page.

4.2 Product Function

The primary function of Kathanak is essentially to write and read the stories. The writings and the read story will be saved in their respective database. The admin will have the access to the whole system environment and that can be modified as per needs. The architecture of whole system is made easy that a

person can login and use the functions. The system database is accessible to admin and admin can only modify the changes.

4.3 User classes and characteristics

The user profiles can register and login into the system and use the required resources. The students can easily fill up the registration form online and submit it. And the admin will check the details that the student is eligible as per the admission criteria. After the student will successfully registered, he can use college system environments as per their limits decided by admin.

4.4 Operating Environment

This software package is expected to work in the following atmosphere,

Microsoft stack consisting of

- OS-Windows 7, Windows 10, Windows 11, XP
- ECLIPSE IDE
- JAVA, PHP, JQUERY, HTML, JAVA APPLETS
- MySQL for RDBMS on Apache server

4.5 Design and Implementation Constraint:

The design time constraints are:

The software package should be designed to handle the access 1-3 admin and 500 students.

4.6 User Documentation

a) *The software package will come with a user's manual as a guide to its interface actions.*

b) *The details of the*

- Analysis
- Design
- Test case of the software package will be delivered along with this software

4.7 Assumptions and Dependencies

No assumption made

5.External Interface requirements

5.1 User Interfaces

The Storytelling Portal web server must provide a user interface that will be accessible through any internet browser, the major ones being Google Chrome and Internet Explorer .

JavaScript implemented in HTML in order to provide a Data Check before submission. HTML Tables to display information to give a clear structure that is easy to understand by the user. Error message should be located beside the error input which clearly highlights and tells the user how to solve it. If the system errors, it should provide the contact methods. The page should display the project process in different colours to clearly reflect the various states that students have done. Each level of user will have its own interface and privilege to manage and modify the project information such as supervisor able to monitor/manage his student progress and make comments on it, student can change his details, view the progress, submit project ideas. The System should provide a feedback form for all users to give comments or ask questions. It should provide a FAQ to minimize the workload of system administrators.

5.2 Hardware Interfaces

All components able to be executed on personal computers with Windows OS platforms and other platforms like Linux, Unix.

a. Server Side

The web application will be hosted on one of the department's Linux servers and connected to one of the school's Oracle Database servers. The web server is listening on the web standard port, port 80.

b. Client Side

The system is a web-based application; clients are required to use a modern web browser such as Mozilla Firefox 1.5, Internet Explorer 6 and Enable Cookies. The computer must have an Internet connection to be able to access the system.

5.3 Software Interfaces

All the interfaces will be ASPX pages running within the internet browser. The SMS must

integrate with the DB through SQL Interface. The system will be hosted in a web server running on Windows Server

a. Server Side

The UOP already has the required software to host a Java web application. An Apache Web server will accept all requests from the client and forward Sums specific requests to Tomcat 5.5 Servlet Container with J2EE 5.0 and Strut 1.2.8 hosting Sums. A development database will be hosted locally (using MySQL); the production database is hosted centrally (using Oracle).

b. Client Side

An OS can run a modern web browser which supports HTML version 3.2 or higher.

5.4 Communications Interfaces

Connections to the system will be over TCP/IP connection. The HTTP protocol will be used to facilitate communications between the client and server.

6.System Features

6.1System Feature 1

1.Description and Priority

In essence the VRU system provides the interface to the main registration database system. Though the back-end database can reliably accommodate concurrent transactional demands, the VRU system is limited in functioning as such. The main registration system is mainframe based DB2 version 7, which has nightly tape back-ups and fail-over system in place.

2.Stimulus/Response Sequences

User role:

The user can register a account and start the progress of the project. Once the register form appeared the users should enter all their detail such as numbers Email, password, Name and Contact number. The system will generate activation code and send email to users and confirm the registration. After the system allow users to change information and provide the function forget password or student to retrieve back the password. Once they logged in they can either write or read the contents

Admin role:

The system administrator must be able to

- 1.Verify the user accounts*
 - 2.deactivate and reactivate user account login*
 - 3.force the sending of a new password to the users via email*
 - 4.Conduct events and can view any user accounts and account details*
- 5.Create groups and add members .*

6.2.Functional Requirements

Writer:

Notification
About*

Admin:

*Verify the users
Add the users
Add the writers
Remove the users
Invite users
Conduct the events
Manage database
Permission to Reset password*

6.3 Other Non-functional Requirements

1. Performance Requirements

This software should be able to handle the following tasks:

- *The admin (2/3) can log into their accounts on an average of 4 hours a day for five to seven days a week*
- *At least 300 students can log into their accounts for 3 hours for 6 days of the week.*
- *It should be able to handle the MYSQL database of 550 students*

2. Safety Requirements

Company enables Users to interact with each other in its community building endeavours between authors and readers. Therefore, Users' names, comments, likes etc are public and can be viewed by other Users. Users must ensure they do not put up any Inputs on the Website/Application which they do not intend to make public.

3. Security Requirements

For Company to offer its Services to Users and to continuously improve the Users' experience, Company collects certain information which constitute personally identifiable information (information which can be used to identify an individual) and non-personally identifiable information (information which cannot directly identify an individual) (together 'User Information'). The Company will never sell or rent any User Information to any third party.

6.4. Software Quality Attributes

Security

The system needs to log Client's information on registration such as IP address and time for security purposes.

Passwords should be encrypted and stored in the database.

Maintainability

The system development using Struts all action is detailed in struts-config.xml and web.xml that is easy to modify and make updates.

Portability

The web application is coding in J2EE and Struts, therefore it should be transferable between different OS and Java Container.

Requirement

For urgent, are tending can send notification by SMS

6.5 Business Rule

1. Registration:

Users have the option to not register on the Website/Application if they do not want to share the mandatory personally identifiable information required to do so. Their ability to use the Website/Application may be restricted as reasonably determined by Company.

2. Modification or Deletion:

Users may modify or delete their profile details from their account settings on the Website/Application. Users are encouraged to keep their information up-to-date.

3. Deletion of Profile:

Users may ask for deletion of their profile and their personally identifiable information will be deleted along with any content they may have published on the Website/Application. However, some fragments of the User Information may still be available on the internet. Further, all history of the User will remain with Company. 9

4. Notifications:

Company would like to engage with Users through notifications for suggested reading etc via the Website/Application and email. A User can set the frequency of such notifications through their account settings or completely opt-out of the same. However, notifications regarding the User's account and the Website/Application itself will continue to be sent.

5. Opt-out:

If a User desires Company to cease usage of his User Information on the Website/Application for any of the purposes mentioned herein, User may write to contact@kathanak.com Company will endeavour to assist Users with its requests and fulfil the requests. However, any such action may adversely affect the User experience on the Website/Application.

7. Exiting system:

The existing system are

1) Pratilipi:

Pratilipi is an Indian online self-publishing and audiobook portal. It features content in twelve languages: Hindi, Urdu, English, Gujarati, Bengali, Marathi, Malayalam, Tamil, Kannada, Telugu, Punjabi and Odia.

It allows users to publish and read original works such as stories, poetry, essays and articles. It also allows readers to rate content posted by others, subscribe to authors and interact with their followers through messaging.

It was launched in September 2014 by Ranjeet Pratap Singh, Prashant Gupta, Rahul Ranjan, Sahradayi Modi, and Sankaranarayanan Devarajan to promote Indian languages. In its initial stage, it was a self-funded platform. Later the creators raised funding of ₹30,00,000 from T-Labs (Times Internet Accelerator) in March 2015 and raised another US\$10,00,000 from investors led by Nexus Venture Partners in 2016.

It also raised US\$43,00,000 from Series A round led by Omidyar Network in February 2018 and in 2020 secured ₹76,00,00,000 in the funding round of Series C led by Tencent

Pratilipi was awarded Eureka Award for Best Business Idea by IIT Bombay and Start-Up Launchpad Award for best startup.

2) Wattpad:

Wattpad is an online social reading platform intended for users to read and write original stories. Founded by Allen Lau and Ivan Yuen, they say that the platform aims to create social communities around stories and remove the barriers between readers and writers.

In January 2021, Naver Corporation announced that it would be acquiring Wattpad; the deal was completed in May 2021. As of November 2021, Wattpad has a monthly audience of more than 90 million users, who can directly interact with the writers and share their opinions with fellow readers.

Wattpad has stories available in more than 50 languages, and nearly 300,000 writers from 35 countries take part every year in the largest writing competition, The Watty Awards. Some of these stories are being transformed into TV dramas and movies, examples are "After" [4 series After(2019), After we collided(2020), After we fell(2021), After ever happy(2022)] and The Kissing Booth [3 parts released in 2020, 2021, 2022].

In January 2019, Wattpad launched a publishing division named Wattpad Books, in an effort to take the "guesswork" out of publishing for authors.

In December 2011, Toronto-based Wattpad was selected as the hottest Digital Media company in the country at the Canadian Innovation Exchange. In the same year, co-founder and CEO Ivan Yuen was also recognized as a top Canadian entrepreneur at the Impact Infused Awards, sponsored by Deloitte.

8. Proposed System:

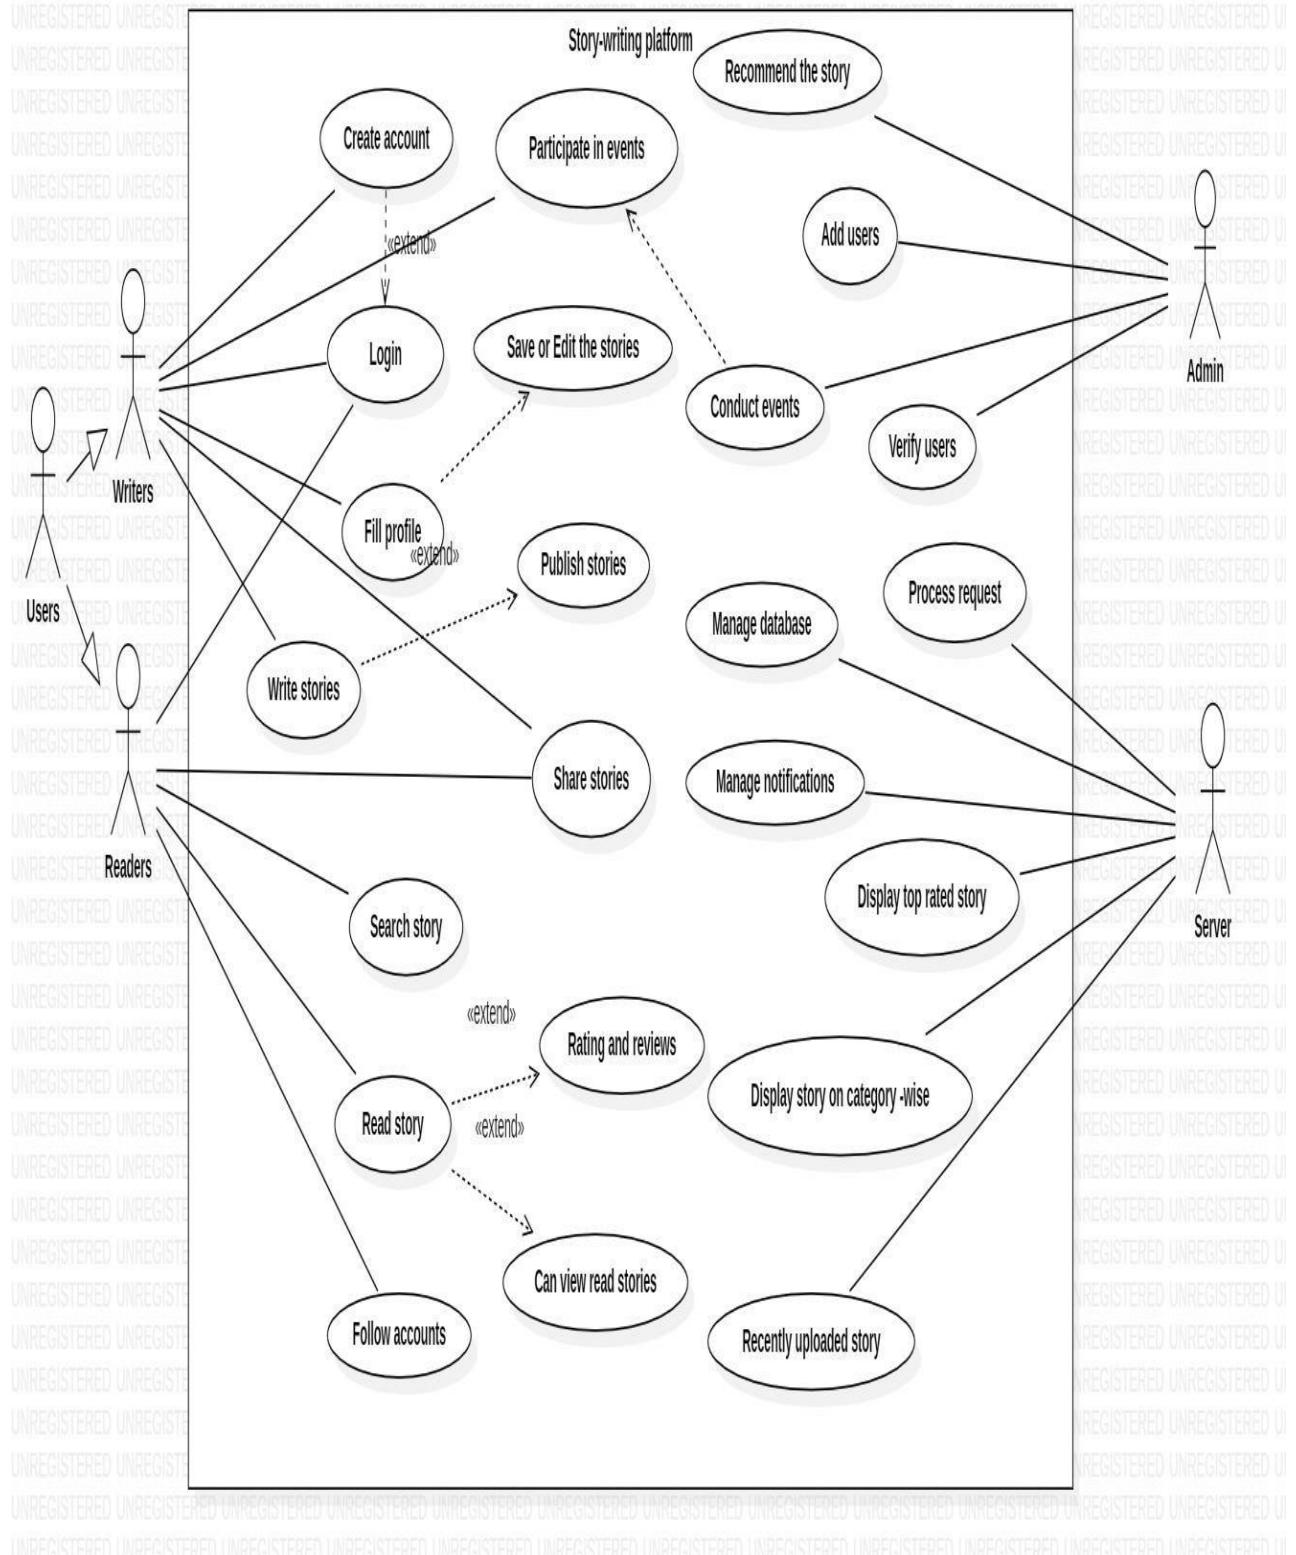

The proposed system is an online story- publishing platform. It allows users to publish and read original works such as stories, poetry, essays and articles. It also allows readers to rate content posted by others, subscribe to authors and interact with their followers through messaging.

The already existing system is designed for global audience, but the proposed system aims for particular domain that is for KCT students. The proposed system is only accessible to the students of Kumaraguru College of Technology and also this system is managed by KCT students.

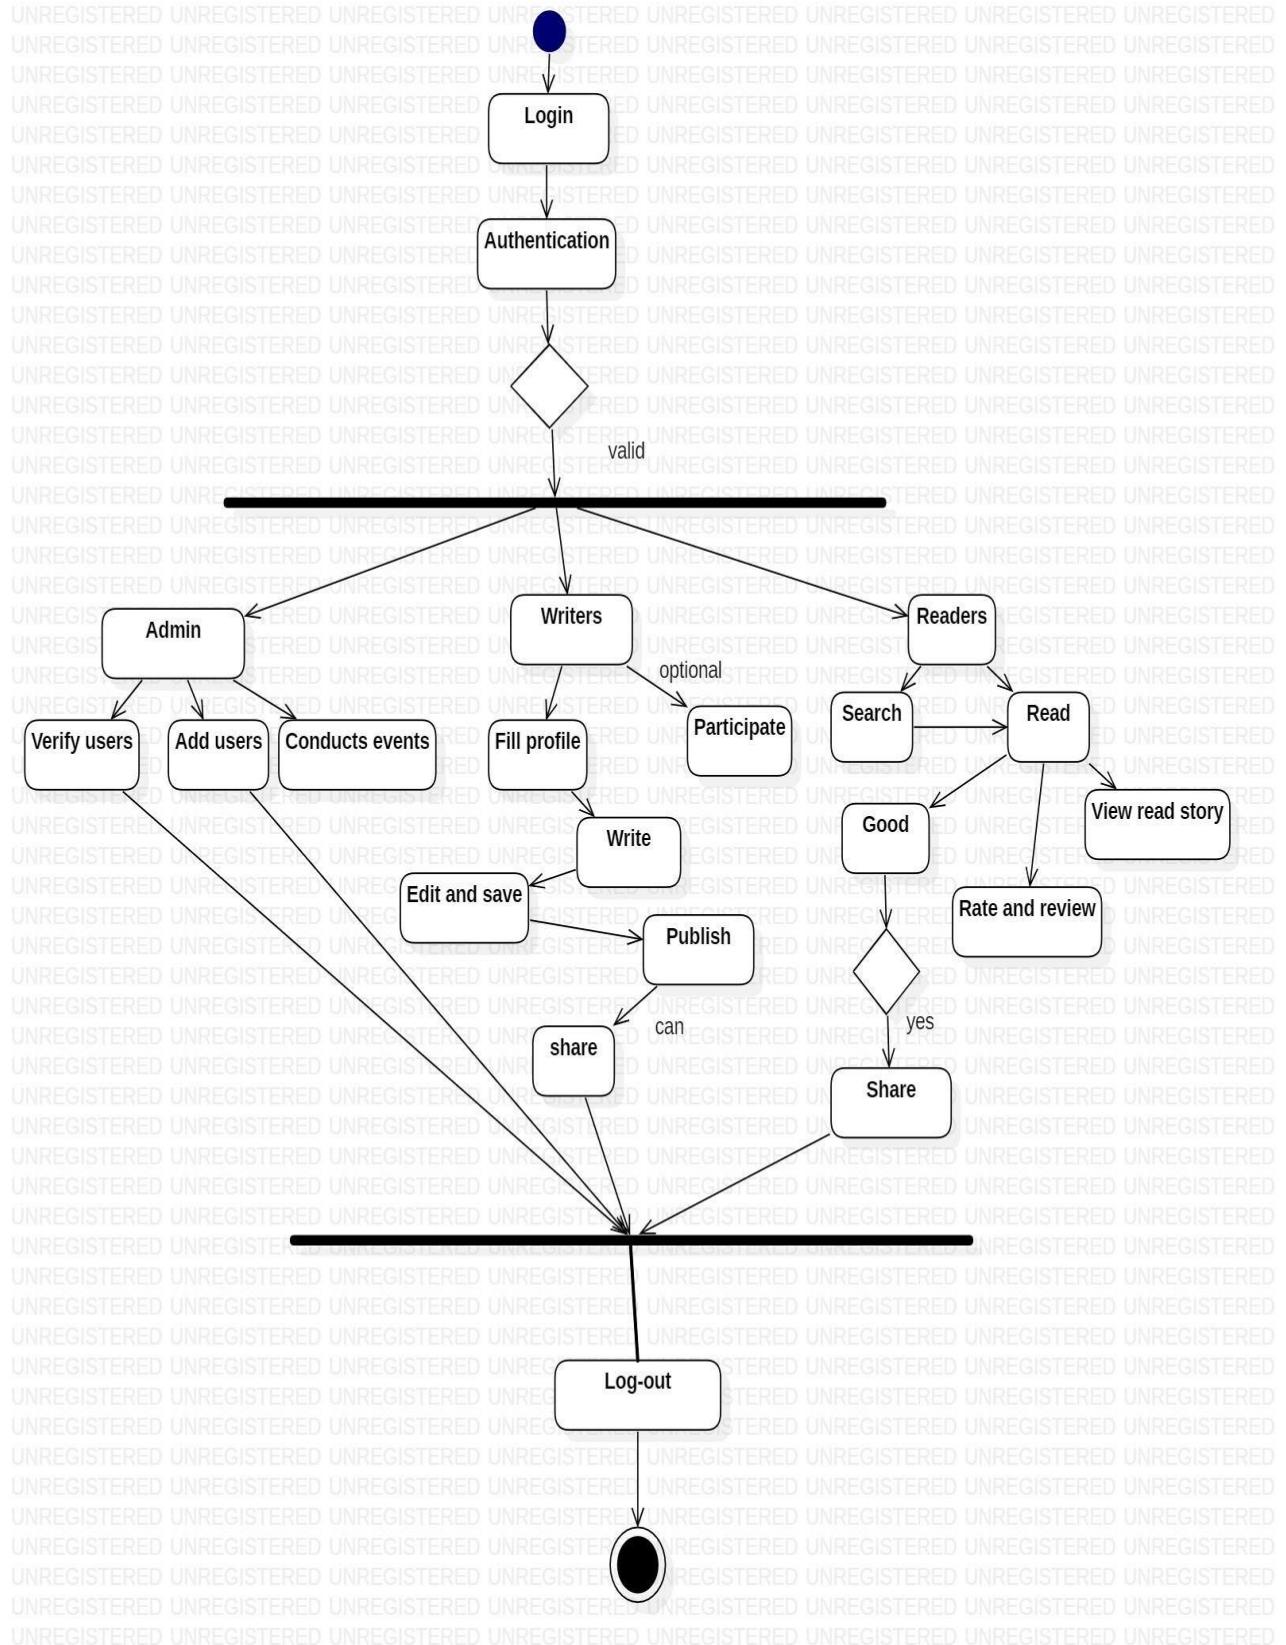

*The proposed system will allow the writers to publish their work in only one language i.e. English.
In future, this system will incorporate many languages...*

Story of Kathanak

Tales have stood the test of time; the art of story-telling is present in every language. In English it comes in many names such as tale, narrative, anecdote, legend, fable, saga; in Hindi, it would be called katha, kahani, dastan; in Tamil it would be called Kadhai and so on, but the fundamental concept being that no matter the language the art of storytelling is eternal.

Centuries ago people would often huddle up around the fire and exchange stories, sing songs, narrate epics. In the 20th Century, in the birthplace of sagas such as Mahabharat, Shakuntala, Panchatantra and many, storytelling was dying, and it was a slow and painful death.

Kathanak, derived from the Sanskrit word meaning "plotline of the story"

Looking forward to seeing you there!

7. About us page :

About Us

Hello authors! We are the members of "Scrabble club" of Kumaraguru College Of Technology. Kumaraguru College of Technology has always helped the students to explore their potential in every possible ways ! In order to do so ,they had introduced many clubs for the admirers of writing, storytelling, dance, music, acting, mime, drawing, painting, embroidery, ornament crafting etc.

So The scrabble club aim is to explore the story writing art. This website is designed in a way so that it provide a common platform for the writers and the readers through stories. The activities, workshops and initiatives that happen in the club are woven to

EVENT section:

The screenshot shows the 'Events' section of a software interface. On the left, a sidebar lists various categories: Home, Activity (with a 'NEW' button), Blog, Events (selected and expanded), Published, Drafts, Categories, Pricing Plans, Subscriptions, Contacts, Communications, and Automations. The main area displays a single event card for 'Togeather'. The card includes the event name, date (Sep 17, 6:30 PM GMT+5:30, Kathanak portal), a colorful floral background image, Sold Tickets (19), Total Sales (INR 0), and a status message indicating 89 days until the event. Buttons for 'Promote' and 'Edit' are also present.

Member section :

The screenshot shows the 'Contacts' section of the software. The sidebar on the left lists: Events, Pricing Plans, Subscriptions, and Contacts (selected and expanded). Under 'Contacts', there are sub-options: Site Members, Workflows, Tasks & Reminders, Communications, Automations, Marketing & SEO, Analytics & Reports, and Finances. The main area displays a list of contacts with columns for Name, Address, Member status, and Last activity. The contacts listed are Kavivarshini V, Moni Murugesan, Moni M, and Monika Murugesan. A 'SITE MEMBER' badge is visible next to Monika Murugesan's entry. A question mark icon is located in the bottom right corner of the contact list area.

Message/Communication section:

The screenshot shows the 'Inbox' section of the Ascend Business Tools platform. On the left is a sidebar with various menu items: Contacts, Communications (selected), Inbox, Chat, Forms & Submissions, Business Email, Automations, Marketing & SEO, Analytics & Reports, Finances, Channels, Settings, Apps, and Quick Access. The main area is titled 'Inbox' and shows an 'Ascend Business Tools' logo. At the top right are buttons for 'Upgrade', 'Settings', and 'Compose'. A notification bar at the top says 'Get notified of new messages.' and 'Turn On Desktop Notifications'. Below this, there's a search bar and a filter for 'All conversations'. The inbox lists messages from 'Shanthini Aj' (Contact) on June 15, 7:03 PM, with the subject 'RECEIVED YOUR EMAIL CAMPAIGN', and from 'Sankamethra Senthilkumar' (Contact) on June 16, 10:38 AM, with the message 'Hi there! Thanks for ...'. A message input field with placeholder 'Type your message...' and a toolbar with icons for reply, attach file, and send are visible.

Notification section :

The screenshot shows the 'Notifications' section. At the top, there are buttons for 'Mark All as Read' and 'Settings'. Below is a list of notifications. Each notification includes a small icon, the notification text, a 'View Order' link, a timestamp, and a three-dot menu icon. The notifications are:

- Monika Murugesan got tickets to Togeather .**

5.Now admin will approve the user :

6.Admin approved and the user gets notified by mail:

Now the user can press “confirm your email “ and can login into the website .

13. Conclusion and future scope :

This project is developed using HTML,CSS,PHP and Javascript module and MySql fully meets the objective of the system which it has been developed. This project is used to provide a common platform for readers and writers through their stories.

It makes use of technology and community in order to help writers find an audience for their stories, and for readers to find new up-and-coming writers to check out and follow.

Talent discovery:

Kathanak is a little like shows such as the X Factor or The Voice, but specifically for writers. Anyone is welcome to join and start publishing their work for free. Kathanak offers resources for writers to grow and develop.

Social platform:

You can think of 'Kathanak' as a sort of social network for writers and readers. Instead of it being a place to like cat videos shared with you by a distant relative, it's a platform to discover stories. It aims to give writers a place to express their unique voice, and has a broad and inclusive approach to genre.

Technology:

As you'd expect from a start-up company targeting millennials and members of Generation Z, tech has a big part to play. This is apparent both on the front and back ends of the 'Kathanak' service. Behind the scenes, 'Kathanak' makes uses various technology to spot the brightest stories among its many uploads.
